Dementia in the Geriatric Emergency Department

September 14, 2020
A GEDC Expert Panel Webinar

Moderated by:

Don Melady, MD
Emergency Physician
Mount Sinai Hospital, Toronto, Canada
GEDC Faculty

A Warm Welcome
To Our Special Guest:

Morgan Daven
Vice President,
Health Systems,
Alzheimer’s Association

Adam Perry, MD
Emergency Physician/Geriatrician,
Thomas Jefferson University, Pennsylvania

Linda Schnitker, PhD, MANP, BSNursing
Nurse Researcher,
Dementia Collaborative Research Centre

Chris Carpenter, MD
Emergency Physician
Washington University
GEDC Faculty

Michelle Moccia,
RN, DNP
Program Director,
Senior ED,
St. Mary Mercy Hospital,
Michigan

Pamela Martin,
RN, MN
Program Director,
Geriatric ED,
Bon Secours-St. Mary’s Hospital,
Virginia
Our Mission

We bring best practice into action.

We transform and evaluate interdisciplinary best practice in geriatric emergency medicine, and then build and distribute practical, evidence-based clinical curriculum and quality improvement tools that support sustainable, quality care for older adults.

Our Vision

A world where all emergency departments provide the highest quality of care for older patients.
Generously supported by

Emergency Department Care of Individuals Who Have Dementia
An Implementation Toolkit

What's Inside
Many older patients are in the ED not because of dementia but with dementia. This Implementation Toolkit contains resources that can help you make changes in your ED to provide better care for those patients. It includes resources and tools and links to the evidence to support their implementation.

Morgan Daven
Vice President, Health Systems,
Alzheimer’s Association

Building Better Outcomes:
Partnering to Support Emergency Departments in Alzheimer’s Care.
The Alzheimer's Association as Your Partner
Empower clinicians with:

▪ training
▪ resources
▪ support

to improve care management through an interdisciplinary approach that optimizes the roles of all members of the health care team.
ENHANCE THE PATIENT EXPERIENCE

Ensure clear communication that provides educated answers and well-planned next steps, so that individuals and their families can:

▪ access care services
▪ make future financial plans
▪ participate in clinical trials.
When patients are diagnosed with dementia earlier in the disease process, treatment can be modified with knowledge of a patient’s cognitive impairment.
Patient and Caregiver Resources

The Alzheimer’s Association offers reliable resources, support and information to all those affected by Alzheimer’s and other dementias, including:

**Free 24/7 Helpline (800.272.3900)** staffed by master’s-level clinicians and specialists, providing confidential support and information all day, every day.

**Face-to-face support groups and education programs** available across the country. Find your local chapter at [alz.org/CRF](http://alz.org/CRF).

**Care consultations** over the phone or in-person where available. To schedule, call **800.272.3900**.

**Online information and resources at alz.org** to help people facing the disease navigate the challenges that accompany a diagnosis, create customized action plans and more.

**Alzheimer’s Association TrialMatch®** a free clinical studies matching service at [alz.org/trialmatch](http://alz.org/trialmatch).
The Alzheimer's Association will partner with you to develop a customized strategy to transform patient management.
THANK YOU

Morgan Daven

Identifying dementia in the ED: Does it matter?
Why is Dementia Important? The “Poor Historian”
Patient Safety: Missed and/or Delayed Diagnosis

- Incomplete History and Physical
- Atypical Presentations
- “Abnormal” (urinalysis, EKG, Chest X-ray...)
- Acute change in status?
Hazards of ED and Hospitalization

• BPSD: exit seeking, resistance to care
• Delirium: hypo and hyperactive
• Adverse Medication Events
• Deconditioning/functional decline
• Goal-Discordant Care
• Informed Consent for tests, admission
• Risk/Benefit/Alternative to admission
Team Discharge Planning: Inpatient or Outpatient
Chris Carpenter, MD, MSC, FACEP, FAAEM
Emergency Physician, Washington University
GEDC Faculty

Dementia screening tools for the ED:
What works best?
How do you screen for dementia in your emergency department?
AD8

If the patient has an accompanying reliable informant, they are asked the following questions.

Has this patient displayed any of the following issues? Remember a "Yes" response indicates that you think there has been **a change in the last several years** caused by thinking and memory (cognitive) problems.

1) Problems with judgment (example, falls for scams, bad financial decisions, buys gifts inappropriate for recipients)?
2) Reduced interest in hobbies/activities?
3) Repeats questions, stories, or statements?
4) Trouble learning how to use a tool, appliance, or gadget (VCR, computer, microwave, remote control)?
5) Forgets correct month or year?
6) Difficulty handling complicated financial affairs (for example, balancing checkbook, income taxes, paying bills)?
7) Difficulty remembering appointments?
8) Consistent problems with thinking and/or memory?

Each affirmative response is one-point. A score of ≥ 2 is considered high-risk for dementia.

Abbreviated Mental Test-4

1) How old are you?
2) What is your birthday?
3) What is the name of this place?
4) What year is this?

Any error is considered high-risk for dementia.

Ottawa 3DY

1) What day is today?  
2) What is the date?  
3) Spell “world” backwards  
4) What year is this?

<table>
<thead>
<tr>
<th>Correct</th>
<th>Incorrect</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>1</td>
</tr>
<tr>
<td>2</td>
<td>3</td>
</tr>
<tr>
<td>4</td>
<td>5</td>
</tr>
</tbody>
</table>

Number correct

A single incorrect response on any of these four items is consistent with dementia.

Physician and Nurse Acceptance of Technicians to Screen for Geriatric Syndromes in the Emergency Department

Christopher R. Carpenter, MD, MSc*
Richard T. Griffey, MD, MPH†
Susan Stark, PhD, OTR/L†
Craig M. Coopersmith, MD‡
Brian F. Gage, MD, MSc§

† Washington University School of Medicine, Division of Occupational Therapy, St Louis, Missouri
‡ Emory University School of Medicine, Division of Critical Care, Atlanta, Georgia
§ Washington University School of Medicine, Division of General Medical Sciences, St Louis, Missouri
Additional Considerations

• Alternative instruments?
• Which subset of ED patients to screen (or not screen)?
• How to discuss dementia screening results with patient/family?
• Actionable response to abnormal screen?

Quality ED care for persons with dementia:
What does it look like?
Older ED population with cognitive impairment

- Complex care needs\(^1\)
- Responsive behaviour (BPSD)\(^2\)
- Safety / ethical issues
- Burden of care
- Caregiver stress/burden
- Increased risk delayed pain assessment and treatment\(^3\)
- Increased risk delirium\(^4\)

\(^1\) Schnitker et al. 2016
\(^2\) Erel 2013
\(^3\) Fry et al. 2015, Terell et al. 2009, Hwang 2006, Meldon et al. 2003, McCusker et al. 1999
At increased risk for adverse health outcomes

The Identification of Seniors at Risk (ISAR) tool: (ISAR)$^1$:

```
<table>
<thead>
<tr>
<th>Question</th>
<th>Score</th>
</tr>
</thead>
<tbody>
<tr>
<td>Before the illness or injury that brought you to the Emergency, did you need someone to help you on a regular basis?</td>
<td>YES</td>
</tr>
<tr>
<td>NO</td>
<td>1</td>
</tr>
<tr>
<td>Since the illness or injury that brought you to the Emergency, have you needed more help than usual to take care of yourself?</td>
<td>YES</td>
</tr>
<tr>
<td>NO</td>
<td>1</td>
</tr>
<tr>
<td>Have you been hospitalized for one or more nights during the past 6 months (excluding a stay in the Emergency Department)?</td>
<td>YES</td>
</tr>
<tr>
<td>NO</td>

<tr>
<td>Do you take more than three different medications every day?</td>
<td>YES</td>
</tr>
<tr>
<td>NO</td>
<td>1</td>
</tr>
</tbody>
</table>
```

The Triage Risk Screening Tool (TRST)$^2$:

- History or evidence of cognitive impairment (poor recall or not oriented)
- Difficulty walking/transporting or recent falls
- Five or more medications
- ED use in previous 30 days or hospitalization in previous 90 days
- RN professional recommendation

$^1$ McCusker et al. 1999
$^2$ Meldon et al. 2003
What data reflects quality of care of older ED patients with cognitive impairment?

Phase 1
- Extensive literature review
- Potential quality indicators created by expert panel

Phase 2
- Field work
- Quality Indicators testing

Phase 3
- Final quality indicators with definitions and scoring rules

Process and Structural Quality Indicators

Quality Care for Older People with Cognitive Impairment in ED – Structure

**Policies outlining:**
1. Management of older people with cognitive impairment and their carers
2. Assessment and management of behavioural symptoms
3. Delirium prevention
4. Pain assessment and management

Picture from: [https://www.process.st/policies-and-procedures/](https://www.process.st/policies-and-procedures/)
Quality Care for Older People with Cognitive Impairment in ED – Process

1. Cognitive screening (new, existing, acutely changed)
2. Screening for delirium
3. Assessing and managing delirium risks
4. Identify a potential aetiology when delirium is suspected or definite
5. Notify and involve nominated support person
6. Collateral history
7. Pain assessment using a verbal and a behavioural or proxy report of pain

Quality Care for Older People with Cognitive Impairment in ED

1. Multidisciplinary approach
2. Person-centeredness
3. Communication
4. Address caregiver stress
5. Delirium prevention
6. Meaningful activities
7. Physical environment
8. Prevent challenging behaviour
9. Staff training
10. Clinical leadership

With courtesy to Dr James Hughes and Dr Ellen Burkett
Education Resource:

A society that does not value its older people denies its roots and endangers its future. Let us strive to enhance their capacity to support themselves for as long as possible and, when they cannot do so anymore, to care for them.”

I nvolve care person; offer resources; engage volunteers
A void diminishing self-image; maximize A utonomy with safety in mind
Establishing Community Relationships

• Alzheimer’s Association
  • First responder education
    EMS, fire, police
  • Placement of Alzheimer’s Association staff in ED or hospital for immediate education/support to families
  • Contact when family crises occur in ED

• Area Agency on Aging
• Local Assisted Living and Memory Care facilities
• Local trusted Senior Advisors
  • Can help family navigate ALF/LTC
• Insurance - Managed care plan contacts
  • In my area we have, JenCare and CareMore

Acute Care for Elders (ACE) 2020 National Conference

Microsoft Teams Broadcast
9:00 AM - 11:45 AM CST

Share on

There will be no registration fee for ACE 2020!
Information on registration is not yet available. Please join our mailing list below to receive updates!

gedcollaborative.com/events/

Details

TARGET AUDIENCE
Physicians, nurses, physician assistants, physical/occupational/speech therapists, social workers, and other allied health care providers involved in the care of older adults.

LEARNING OBJECTIVES
At the end of this conference, learners should be able to:

1. Identify and address the unique vulnerabilities of older adults who are acutely ill or injured.
2. Describe practice improvements to better address the needs of older individuals in the emergency department, in our hospitals, in programs to avoid hospitalization, and in transition between health care settings.
3. Describe key lessons learned as our health systems prepare to care for populations of older Americans.
Q & A
